

HENNEKE

This is Henneke.

To create something great from an idea.

From fantasy to design-reality.

To realize an ideal of perfection from a dream.

That's what Henneke stands for. For the realization of all those projects that many wouldn't dare tackle even though they would love to.

Tasks from which we shrank back in the past, are now – after 20 years of experience – the reason why we are so successful.

New challenges are skillfully executed by us on a daily basis.

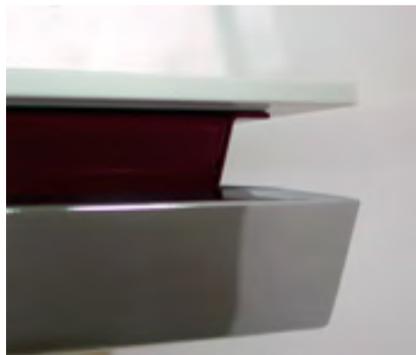

Our passion is to work especially with wood and Corian® - these materials allow us to make possible the impossible.

From a dream to reality.

THE COMPANY

Henneke Formbau GmbH, which began as a small workshop operation in 1988, has evolved into a market leader - not only in the field of mold construction for ceramic and fireproof components but also as a specialist for Corian®.

—

**FRANK HENNEKE**

A trained carpenter and young entrepreneur, Frank Henneke founded Henneke Formbau GmbH in 1988. The company's main activity is the manufacture and processing of molds for ceramic and fireproof stones, which are of great importance for large scale industry.

Moreover, Henneke Formbau GmbH is one of the first businesses of the wood-working industry to offer CNC- and CAD technology in the processing of material. Henneke Formbau GmbH has been involved with the processing and distribution of Corian®, a futuristic material, since 1997. In 1999, Henneke Formbau GmbH was designated as an authorized processor of Corian®. Beyond this, it was also awarded membership to DuPont's Quality Network.

After some 20 years of experience and a remarkable track record in the field, Henneke Formbau GmbH has emerged not only as a leading manufacturer in the area of molding ceramic and fireproof components but also as a specialist in the processing of Corian®.

A stylized, handwritten signature in white ink, consisting of the letters 'h', 'e', and 'n' connected together in a cursive script.

MADE IN THE SAUERLAND

The Sauerland is located in Westphalia’s southern region. It serves as the home to many manufacturers of high quality products and market leaders in specialized industrial sectors that attach importance to producing on home turf. This important economic base also provides a home for many globally-operating businesses. And we, too, appreciate what the Sauerland has to offer. Frank Henneke, the company founder, grew up in the Sauerland. And, no matter where he went for inspiration, he always returned to his home base. In 1988, he found a home in Plettenberg, in the district “Markischen Kreis”, where he also laid the cornerstone for his business. It turns out that this was the right decision. Today, Henneke is proud that his products bear the designation “Made in the Sauerland”. We attach great importance to manufacturing in Germany. To ensure quality, craftsmanship and tradition, we made a conscious decision to forego any outsourcing of our manufacturing processes.

Our home base means a lot to us and we are pleased to support it with the creation of new jobs for people who cherish the charm and quality of this region. The quality of our products is not only revered within Europe but overseas as well. Indeed, Henneke Formbau GmbH also offers its products in the United States, South America and Asia. It is proud to be an independent, mid-sized company that endeavors to deliver state-of-the-art craftsmanship and unsurpassed quality. We do business in the following countries:

CORIAN®

Corian® is a mineral and acrylic composite material that is characterized especially by its flexible and customizable range of applications. Well-known as a high-quality design material, its popularity continues to grow due to its 3-dimensional thermoformability, its translucence, and also the fact that it can be joined seamlessly to create large surface areas.

Thus, Corian® can be found in various environments. Its unique material properties allow it to be used both indoors and outdoors, in the catering trade, facades or physician's offices. Corian® is available in over 100 colors. It is also available in bright colors such as blue, red or green. Furthermore, you can choose silky luster, high gloss or matt variants. Corian® is an innovative and durable material that allows an extensive range of individual possibilities for high-quality design products.

LASTING VALUE

A Corian® installation is durable – very durable. This results in extended refurbishing intervals and concomitant cost savings. Corian® is an investment that is amortized over the years. As this long-lasting material can be renewed, Corian® installations retain their original beauty for a very long time.

SOLID

Colors and patterns permeate the entire thickness of the material and will not wear away. Corian® is a solid material that doesn't chip off. Scratches or signs of use can easily be buffed out by sanding and polishing.

TRANSLUCENT

The translucent quality of Corian® – especially in the 6 mm-sized sheets in light colors – is quite eye-catching because light intensifies the three dimensional impression that Corian® gives. Thus, lamps – or even just lettering, logos and ornaments – can be designed using light.

THERMOFORMABILITY

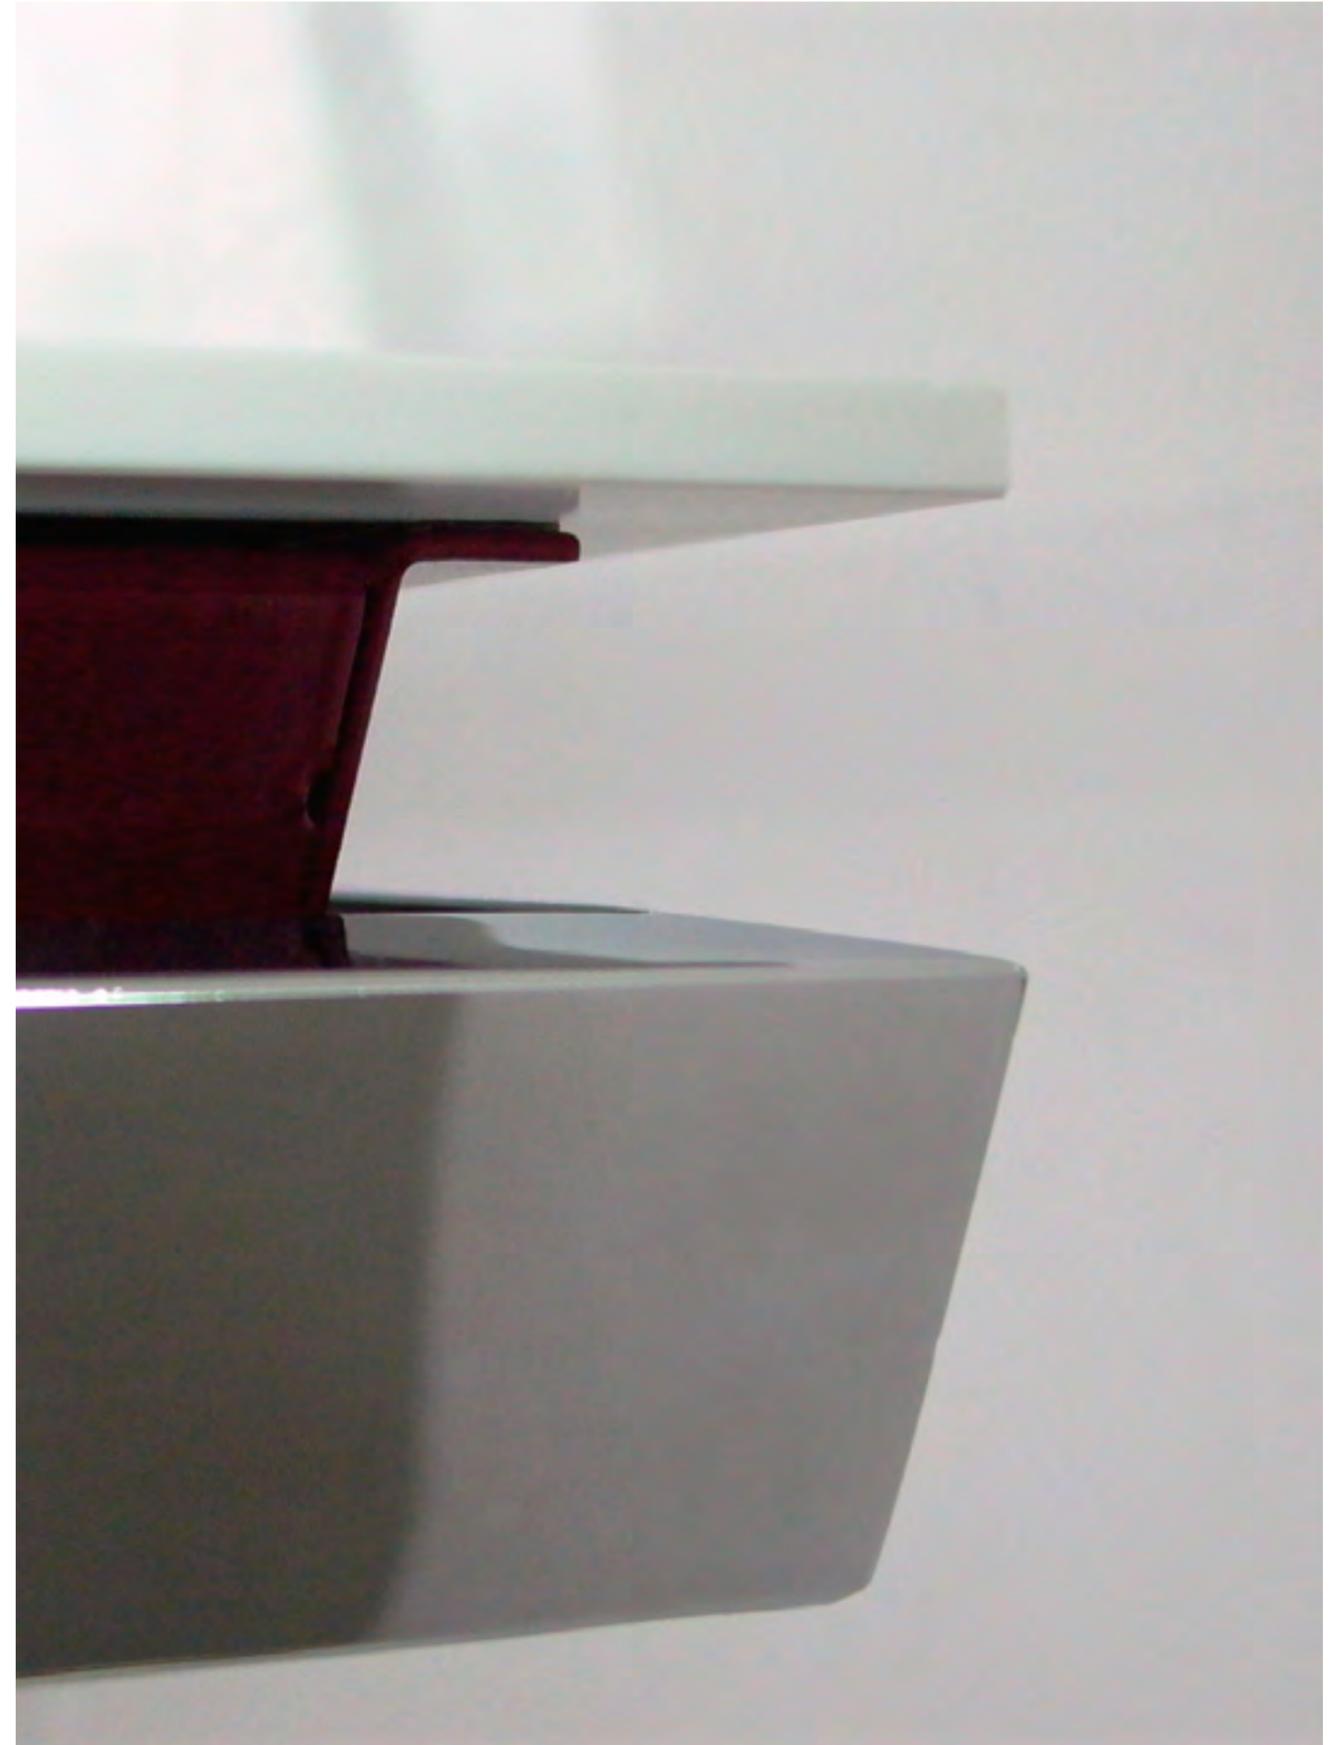

At a certain temperature range, Corian® can be thermoformed into 2 or 3-dimensional objects. In combination with the ability to join pieces seamlessly, this allows for nearly unlimited possibilities in the designing of Corian® objects.

SEAMLESS

Corian® pieces can be joined seamlessly. This allows the design of large-scale surface areas. Edges can be reinforced, large countertops can be fashioned of several pieces and joined in-situ without visible seams. The finished result will look as though it had been fashioned of one piece.

**SUPERIOR HYGIENE**

Solid Corian® surfaces are smooth and non-porous and thus will not harbor mold or bacteria. Liquids and impurities cannot penetrate Corian®. This makes Corian® easy maintenance. The material does not react chemically; it is hypoallergenic and will not emit gases at normal room temperature. It thus meets all relevant regulations and other local manufacturing requirements.

USE IN LIVING SPACES

Corian® is convincing in residential areas not only because of its durability and the sculpted contours that it can demonstrate but also through the ease with which it can be combined with other materials. It pleases the eye in any color or form and offers space for new ideas owing to its sound-absorbing property.

USE IN THE KITCHEN

Corian® is ideally suited for use in the kitchen. It is durable and customizable for any kitchen range. Thus, water connections, sinks or stovetops can be integrated seamlessly. Its closed-surface characteristic ensures that neither dirt nor mold will be harbored.

USE IN THE BATHROOM

Corian® is frequently used for bathroom fittings. Its ability to take on just about any form offers almost unlimited design opportunities. Entirely new forms can be created owing to its ability to be joined seamlessly. Just about

anything – bathtubs, shower cladding or vanity tops – can be custom-made using Corian®, which also offers superior hygiene.

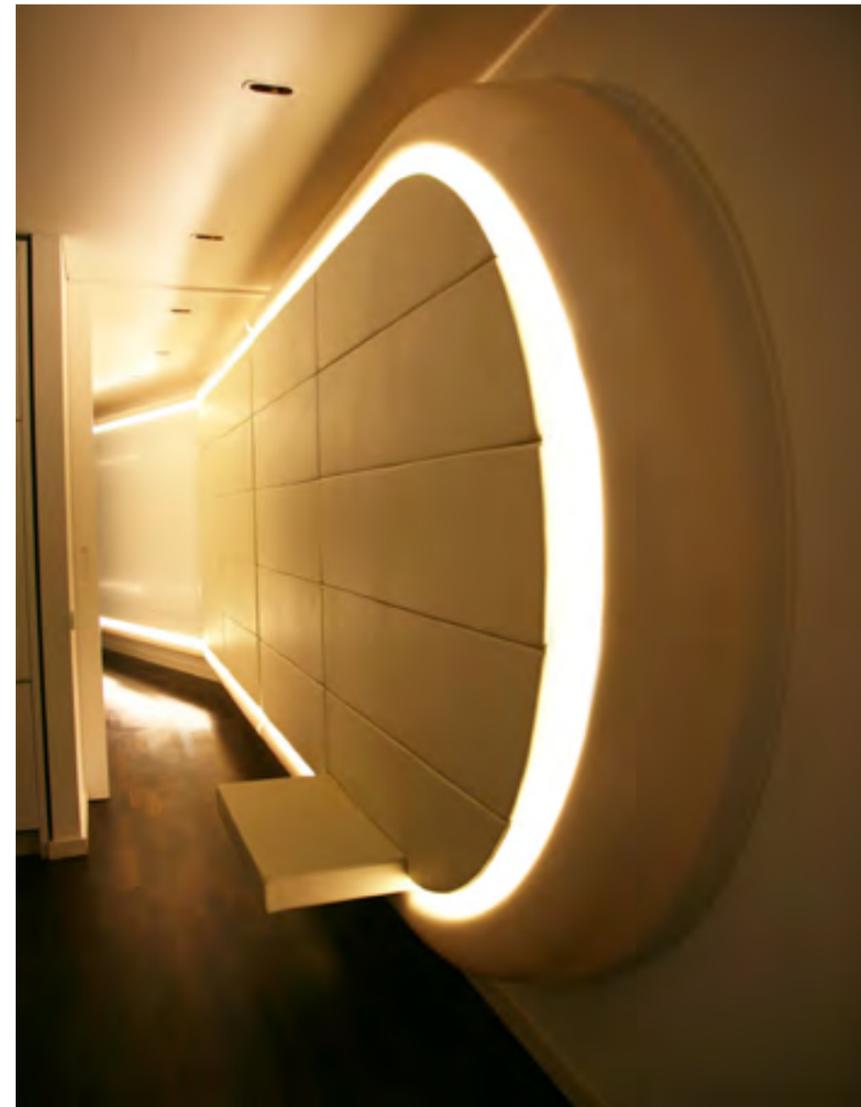

CORIAN® IN PUBLIC SPACES

Corian®'s® array of beneficial features goes hand in hand with many possible fields of application. These can be found just about anywhere and vary widely. Indeed, the use of Corian® is just as popular in health care as it is with retailers. It's resistance to UV rays and weathering also paves the way for use in exterior facades.

CORIAN® & LIGHT

Corian® takes on a very special effect in connection with light. Individual pieces of furniture or objects, which have been fashioned of Corian®, can be illuminated to bring their depths to the surface. Corian®'s® excellent durability also allows its use for lampshades and other translucent objects.

**UNIQUE**

Corian®'s unusual versatility makes it very suitable for both public and day to day life. Its robustness and seamless joints also provide a uniquely smooth appearance that is ideal for countertops in bars or for use in objects with large surface areas like exterior facades. Corian® offers superior hygiene and is approved for use in the healthcare sector.

**OUR SERVICE**

Each idea is unique.

Henneke GmbH is interested in supporting your endeavor and provides customized advice for every project. We will make a visit to your home or business so that we can make plans together.

As we love to take on new challenges, realizing your projects is our number one priority. Our extensive experience equips us to find the perfect solution in executing your ideas. We won't settle for a compromise! We put all of our expertise at your disposal to realize even the most complex project with utmost professionalism. Whether a long countertop or jewelry, we have a history of demonstrating consummate professional competence and would love to win you over as well.
